

To: users of Applied Math Lab AB 3333
1/26/06

Equipment has been installed to enable the use of a laptop computer with the projectors in the Applied Math Lab. This equipment consists of a video switchbox located under the instructors table, right side; and a video cable located on the right side rear corner of the table top.

To connect a laptop to the projectors, follow these steps:

Connect the video cable on the right side of the instructor desk to the video output port on the laptop. (The video output port on the laptop computer may need to be enabled prior to use; check your users documentation for the proper procedure.)

Change the video switchbox input to "2", by pressing the "Select" button on the front panel of the switchbox. You should see video from the laptop on the instructors monitor and the video projectors.

When finished, change the video switchbox back to position “1” by pressing the “Select” button on the switchbox front panel.

*** If you ever experience a situation where there is no video from the instructor pc, please check to make sure the switchbox is set to position “1”.

If you have any questions, or need more assistance with this equipment, please feel free to give me a call or email.

Thanks..

Glenn
